

# airtouch

THE INNOVATIVE WAY  
TO SECURE YOUR CONTROL TOWER

## Smart Tower Suite

---

Daily, Air Traffic Controllers have to make quick decisions, based on the large amount of information they get from numerous systems. Integration and analysis of this information, supported by **airtouch**, the easy to use software, enables reducing controller's stress.

## Gather and Share information from all your airport equipment

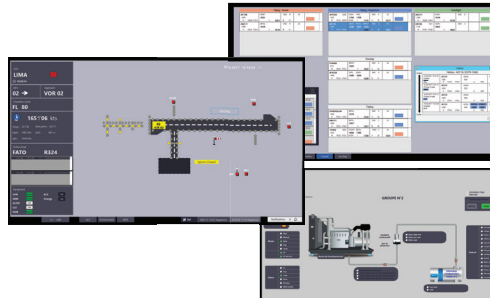

Energy

Telecommunication

Runway Lighting

Nav aids

Radars

Weather

### A SMART SYSTEM

airtouch provides users with an easy access to information and decisions. This is due to its smart features, such as: tools to support operational and maintenance decision making, smart flight management (e-stripping), centralised alarm logging, remote sites operation (RTC, hotspots, support aerodrom). All this enables users to operate efficiently and without stress.

### DESIGNED WITH THE CUSTOMER

Taking advantage of its scalable software and hardware architecture and of its operationally assessed HMI, airtouch design ideally addresses current and future customers requirements. Furthermore, airtouch numerous libraries and impressive know-how yield to wide interoperability with legacy equipment as well with latest technologies.

### ALL IN ONE INTEGRATION

Get a unique information through the integration in only one system and give to all your operators (from air traffic controllers to maintainers) the same and continuous information.

### SAFETY AND AVAILABILITY 24/7

The very high availability is rooted in the genes of airtouch: sustainability and redundancy of equipment (servers, operator positions), power supply, network links, software, backup modes. Your IP network is protected from intrusions. Users are authenticated through their profile and permissions.
