The purpose of this training course is to learn about AudioLAN configurator tool called GRANIT and to acquire elementary notions in order to set basic configurations allowing a quick operation on your **AudioLAN** platform.

This course covers several aspects :

- Expression and configuration of simulation operating needs
- Establishment of site parameters
- Exercise configuration
 - Definition of roles and interlocutors,
 - Assignment of personalized parameters,
 - Choice of HMI
 - Allocation of frequencies and telephone communications.

Different implementation solutions are discussed through progressive and pedagogical exercises fitted according to the participants needs.

Training program

DAY 1 :

Platform specifications

Creating practical with Granit

- Fundamental principles and concepts
- Steps to express your need
- From the need to the board to its realization with GRANIT
- Tips & Good practices

DAY 2 :

Granit

Advanced configuration management

- Concept of "clone" applied
- Concept of "model" applied
- Group and conference calls
- Grates
- The troubles

PARTICIPANTS' PROFILE

This course is intended for the administrator of AudioLAN who is in charge to :

- Configure GRANIT
- Maintain and adapt GRANIT to the site constraints
- Create pedagogical exercises on air traffic control simulations
- Master GRANIT and bring more to AudioLAN simulations

PRE-REQUISITE

- Training module 1 AudioLAN1 done
- Good knowledge of air traffic control tools.

PEDAGOGICAL RESSOURCES

- AudioLAN GRANIT expert as a trainer
- Practical and individual exercises on simulator
- One computer per participant with GRANIT

MONITORING AND EVALUATION

- Individual evaluation performed by the trainer
- Monitoring of each participant through pedagogical and progressive exercises

END OF TRAINING

- Delivery of a certificate
- Participant and trainer evaluation form
